PROFESSIONAL SUMMARY

I am a software developer who develops Full Stack web projects and constantly improves himself in the fields of React, TypeScript, Docker and SEO.

I started my career with individual projects; I have developed 10+ different applications and put 7 of them live.

I work with Node.js & Express in the backend, modern JavaScript libraries in the frontend, and MongoDB & SQL on the database side.

I designed, coded and published my projects from scratch; I took an active role in all processes such as domain, SEO, API and UI/UX flow.

I am currently looking for a job as a Full Stack Developer in the field of web development.

SKILLS

Frontend: React, EJS, Redux, Tailwind, Vite, Bootstrap, TypeScript, Material UI, React Icons, Lottie Animation

Backend: Node.js, Express.js, REST API, Nodemon

Database: MongoDB, Sql

Automation: Python, Selenium, BeautifulSoup, Tkinter

DevOps: Docker, Vercel, Render, GitHub Actions, SEO, Domain Management

Others: Git, dotenv, RPA, ESLint, Prettier, Responsive Design, Framer Motion

SOFT SKILLS

Teamwork and effective communication, Time management and planning, Problem solving and analytical thinking, Fast learning and adaptation to change, Project process management

PROJECTS (HIGHLIGHTS)

My Personal Portfolio Website

- Portfolio site built with React + TypeScript + Tailwind + Express + MongoDB
- Advanced portfolio site that dynamically displays projects, crawls and displays README.md files in subfolders.
- It has been made Docker compatible, SEO and speed optimizations have been made.

→ [Personal Portfolio Website](#)

Nergis Academy Website

- Consulting website developed with EJS + Bootstrap + Express + MongoDB.
- I managed SEO compliance, domain management (Namecheap), sitemap.xml and live launch processes.
- I implemented modern design and API integration focused on user flow.

AI Audio Emotion Classifier

- Audio-based age, gender and emotion prediction with Python & Deep Learning.
- User interface with Tkinter and result visualization with matplotlib.
- Data collection and preprocessing processes were planned from scratch.
- Fake audio files were generated with Google API.

Google Best Place Search

- Node.js based backend + REST API, frontend interface developed with React.js.
- Listing and ranking of "Best places" using Google Maps API.
- Location based scoring algorithm was developed on the backend side.
- A team project that provides location based ranking and scoring.
- I managed the backend API and frontend connections.

City Bus Tracker – Siirt Municipality Internship Project

- System that shows remaining time to stop and next stops on bus screens
- I did data scraping + CSV automation with Python, prototype screen design with Tkinter GUI.
- Backend data processing & frontend visualization steps.
